

Subtract the given fractions and write down the answers (using cross multiplication method)

$$\frac{2}{4} - \frac{1}{3} = \frac{1}{6}$$

$$\frac{1}{7} - \frac{1}{8} = \frac{\quad}{\quad}$$

$$\frac{1}{3} - \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{5}{8} - \frac{3}{9} = \frac{\quad}{\quad}$$

$$\frac{3}{6} - \frac{2}{5} = \frac{\quad}{\quad}$$

$$\frac{2}{4} - \frac{1}{7} = \frac{\quad}{\quad}$$

$$\frac{4}{7} - \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{5}{6} - \frac{3}{4} = \frac{\quad}{\quad}$$

$$\frac{2}{3} - \frac{1}{4} = \frac{\quad}{\quad}$$

$$\frac{7}{8} - \frac{1}{5} = \frac{\quad}{\quad}$$

$$\frac{3}{5} - \frac{2}{4} = \frac{\quad}{\quad}$$

$$\frac{6}{7} - \frac{3}{5} = \frac{\quad}{\quad}$$
